Scientifically Driven Formulations

Made-in-Singapore

Industry-Leading Skincare
Formulations

A close-up photograph of a laboratory environment. A gloved hand holds a clear glass vial containing a yellow liquid. The vial is positioned under a curved metal faucet. The background is blurred, showing various laboratory equipment and glassware. The lighting is bright, creating a clean and professional atmosphere.

ABOUT CELCODE

Who We Are

Celcode is a Singapore-based dermatological lab founded by industry veterans. We specialise in the production of high-quality customised skincare formulations.

Constantly sourcing new ingredients from around the world, our team focuses on extracting the best essences and developing high-efficacy products.

We also specialise in combining multiple points of research in a single product, using meticulous processes and clinically proven ingredients for dependable results.

What We Do

The skincare industry is highly competitive, which means consumers demand new, improved products all the time.

Celcode can help you with this. With our leading, in-house R&D team, we have made a name for ourselves in innovative processes and constant evolution.

We'll work with you in bringing your brand vision alive through the entire manufacturing process, from market research to formulation & testing, to product development, and even to packaging & delivery.

Our R&D Team

Our R&D team has a simple goal: to find the best product outcomes for you and your brand.

We achieve this with our underlying philosophy that focuses on the innovation and improvement of four key factors in formulations. These are efficiency, penetration, absorption, and uniqueness.

With this driving all of our efforts, you can be certain our formulations meet the highest standards in the market.

The Benefits of Working with a Singapore Manufacturer

Quality and Standard Assurance

Celcode guarantees Made-in-Singapore quality for all products, with every formulation meeting Singapore's regulatory standards.

We also ensure that our formulations are SLES-free, paraben-free, and sulfate-free.

Significantly Shorter R&D Process

With a local R&D team, you'll be able to give and receive much quicker updates on research about your product formulations.

Bring Your Brand Vision to Life

We can help you bring your brand vision to fruition through our manufacturing process. From meeting international standards to adhering to your brand's values and principles, we ensure every step is in line with your business's identity.

If preferred, we are able to develop formulas that are organic, vegan-friendly, Halal, environmentally-friendly, and cruelty-free.

Cost Savings through Time and Effort Efficiency

Having local manufacturers means less time is spent on shipping items back and forth from your homebase to the lab.

This also allows your brand to innovate more quickly, and go to market in the shortest possible time.

Smaller MOQ

Most offshore manufacturers have average minimum order quantities or MOQ of 5,000.

Celcode helps brands by providing a much lower MOQ, allowing time and space for small-batch product launches.

Our Core Services

**End to End
OEM Service
for Skincare &
Supplements**

Types of Products

Skincare Formulations

Extensive Cleansers, Toners, Exfoliator

Professional Strength Peel

Long lasting Hydration Range

Effective Whitening Range

- Hyperpigmentation
- Brightening

Pre & Post Procedure Range

- Wrinkles and Fine Line
- Rejuvenation
- Lifting

Anti-Acne & Oil Control Range

Anti Sensitive range

Professional facial treatment kit

Ampoule

Mask - Sheet and cream

Supplements

Hair & Scalp Formulations

Alopecia & Dandruff

Anti-Hair loss

Types of Texture

Cleanser Bases

Lotion Bases

Gel Bases

Serum Bases

Cream Bases

Our Clients

We have a wide range of clients who come to us for formulations. These include but are not limited to the following:

Medical Doctors

These come to us for help compounding solutions for their aesthetic practices. Many ask us for formulations with a high dosage of active ingredients, which require careful testing and balance during development.

Skincare Professionals

A lot of skincare professionals ask us to prepare custom formulations for salon use. We have produced many professional treatment products and retail products for such clients.

Skincare Brands

Skincare brands come to us for end-to-end OEM service. We can provide them with a full range of products for their business.

ANTI-AGING

Royalactin

For Rejuvenation Beyond DNA

Smoother Skin in just **28 Days**. Nano-encapsulation technology improves delivery of Royalactin, which stimulates the epidermal growth factor (EGF).

Decades of study into DNA have led to the next frontier in skincare. This is thanks to epigenetics, the study of how your environment and behaviour affect the way your genes work.

The epigenetic secret of a Queen Bee and its worker bees lies in royalactin, a protein found in royal jelly.

Scientists found that, while all bees in a hive are genetically identical, the queen bee is *larger, more resistant to environmental stresses, and lives ten times longer* than her worker bees. This is due to the effect of the royalactin in royal jelly, which the Queen Bee is exclusively fed with all her life.

Royalactin interacts with the epidermal growth factor (EGF) and activates EGF receptors to:

Accelerate epidermal regeneration for smoother skin

Activate the cellular cleaning process

Reveal a more even-toned skin

Delay cell aging

WHITENING

Melazap

3rd Generation
Complexion Whitener

Nobel prize winning discovery

Originating from a Korean oriental plant, Arisaema Amurense, Melazap is our third-generation, highly concentrated Phyto whitener. It erases melanin and inhibits melanin synthesis via an autophagy mechanism called Melanophagy.

In efficacy testing, this new-age ingredient has superior whitening effects that have been clinically proven to be:

More safe, effective and non-toxic than Kojic Acid

Safe for sensitive skin

Able to provide a better whitening effect than Alpha arbutin

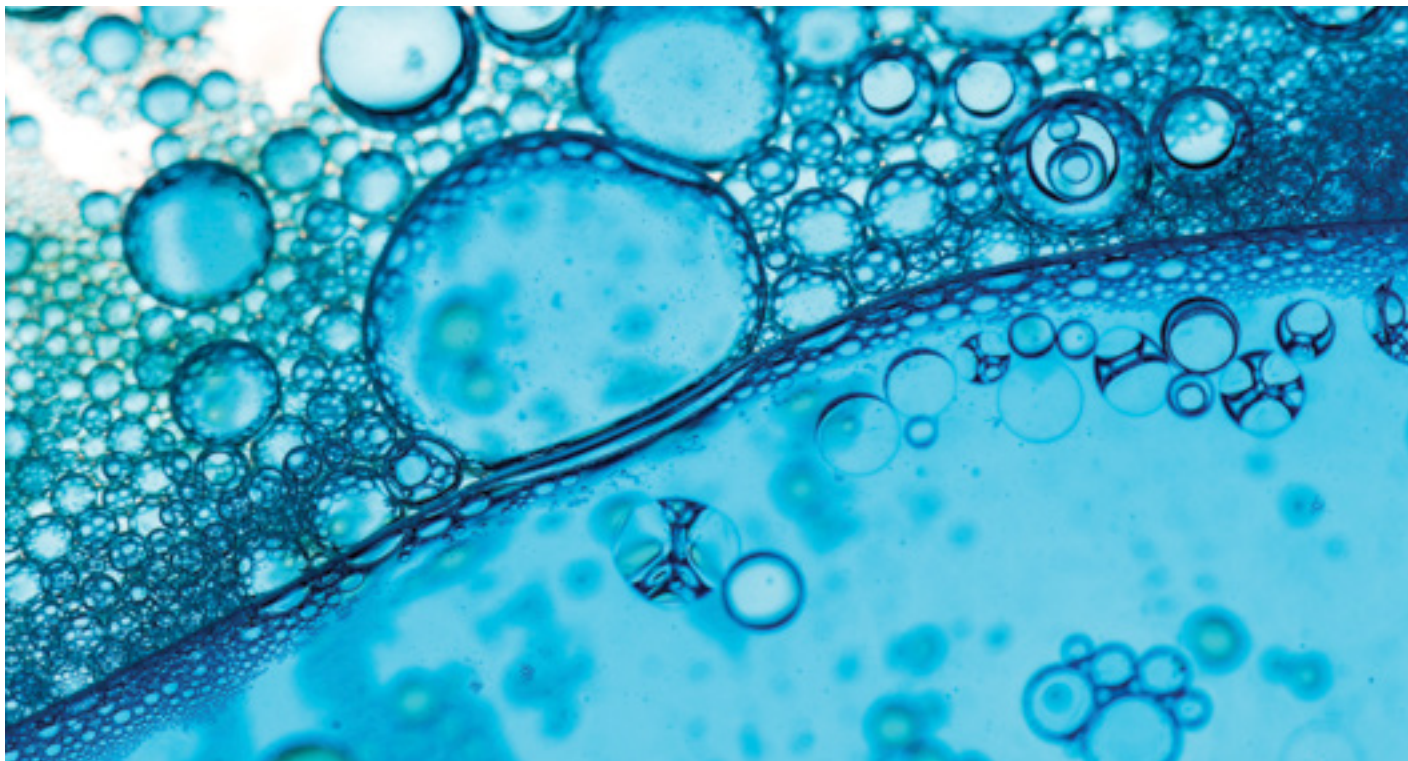

Able to show rapid results in 2 weeks for lesser hyperpigmentation

HYDRATION

Hydra Survivor

Tapping on Nature's Rehydration Techniques

Hydrates the skin
for **8 hours** after just
one application, with
maximum skin moisture
increase of **49.5%**

This 100% natural anti-aging and cell boosting active ingredient mimics the cell protection function of a myrothamnus flabellifolia plant, also known as the desert resurrection plant.

The plant is able to survive in extreme conditions like long-term dryness, high temperatures and extreme UV-radiation. Its leaves appear dead and shrivelled, but become quickly revived with short periods of rainfall.

Similarly, scientists have found this active ingredient is able to quickly and efficiently rejuvenate and revitalise aged or tired skin.

In various in vivo tests, Hydra Survivor has been tested to:

Combat the issue of thinning epidermis with aging, showing increase in skin density of mature skin by 9.9% in 4 weeks

Increase skin elasticity and smoothness

Help with tissue repair efficiency and stimulation of growth factors in just 48 hours

ANTI-ACNE

α -inhibit

The Secret to Our Renowned
Comedone Solution

Reduce active
sebaceous glands by
40% in 28 days

Seba-reduce is a multi-award-winning active ingredient that provides a long-term solution to skin acne.

Through in vitro and in vivo tests, this active ingredient has been clinically proven to:

Regulate and optimise skin microbiota by selectively inhibiting acne bacteria

Shut down inflammation by suppressing the skin's key inflammation enzymes

Reprogramme overactive sebocytes, returning them to their original state in order to normalise sebum production

Regulate the skin microbiome to prevent formation of acne pustules

Reduce signs of acne

Provides even, youthful-looking skin (in-vivo study)

BRIGHTENING Gluta C

Ultra-stabilised, Ultra Potent
Vitamin C Formulation

100% stability
and penetration

Celcode's proprietary innovation, Gluta-L Ascorbic C is a cut above traditional brightening products.

This formulation offers instant skin brightening, reduces skin pigmentation and evens skin tone. It also enhances skin complexion and elasticity by stimulating collagen production.

Our innovation solves critical issues with typical blends by combining a series of highly stable Vitamin C and antioxidant actives, such as Gluta C.

About Gluta C:

100% stable up to 6 months at 40°C

Superior anti-pollution and blue light protection properties compared to free ascorbic acid

Provides superior protection against UVA lipoperoxidation

More than 40% penetration into dermis in just 30 minutes with in-situ release delivery system

Beauty is an
art, we make
it into science
